

**The ONLY Exhaust Removal System Offering**  
**Carbon Monoxide (CO) and Nitrogen**  
**Dioxide (NO<sub>2</sub>) Sensor**

Invisible  
**Invisible**

**Odorless**

Air Technology Solutions has announced the addition of an optional CO and NO<sub>2</sub> sensor as part of our package to provide clean air for the entire station. Elevated levels of Carbon Monoxide and Nitrogen Dioxide can be caused by furnaces, power saws, generators, gas heaters, and passing motor vehicles.

This sensor will provide an additional level of protection to your firefighters by acting as an automatic "fail-safe" activation when these invisible, odorless gases rise to unsafe levels. Your continued safe air and the safety of everyone who visits your station is unmatched by any of our competition.

Test results from Philadelphia Fire Department and Toronto EMS confirm the reduction of CO and NO<sub>2</sub> levels well below regulatory requirements by the AirMATION system.

AirMATION® is a registered trademark of Biological Controls.
